

25 PZP

The pump model **25 PZP** is a completely pneumatic and reciprocating in operation pump for delivery of liquids with maximum delivery rate of 25 litres/minute.

The pump is equipped with a pressure regulating valve and an air pressure gauge.

The pneumatic motor is fitted with internal valves and is completely isolated from the mechanical parts of the pump. The pump is supplied with stainless steel ball valves for suction and delivery.

All sealing gaskets are made in P.T.F.E. (Teflon).

The pump is fitted with a flange which allows a ¾" gas stainless steel draft tube to be bolted to the container lid. The bottom of the draft tube has a fine gauge filter fitted for protection of the pump unit against impurities.

The pump is completely explosion-proof and is operated on product demand.

The pump 25 PZP pump is designed to feed liquids of any viscosity.
