

## FEEDING/ACCUMULATION TABLES

Coster offers a wide range of accumulation/feeding tables in both circular and linear versions.

Circular tables are equipped with a stainless steel base and rotary table of antistatic material.

Linear tables are equipped with a stainless steel base and a “roller shutter” belt that transports the cans to the packaging machines.

All tables are characterized by easy installation, high versatility and automation and a structure that guarantees the robustness of the machine and reduces vibration and mechanical stress to a minimum.

A pneumatic system prevents the cans on the belt from blocking the smooth flow, thus guaranteeing considerable autonomy and uninterrupted use.

The feeder does not require maintenance work.

All components are easy to check and only a few simple steps are required to clean the belt.
