

The semi-automatic test bath **VSA35** can be used with aerosol filling lines at medium capacity.

The group consists of a suitable insulated tank with all parts in contact with water in stainless steel.

The tank is available in 4 versions. All the versions can be supplied with a conveyor section.

Version "A"

Electrically heated tank complete with water circulation pump.

Version "B"

Tank pre-arranged for steam heating and equipped with a water circulation pump.

Version "C"

Electrically heated tank without water circulation pump, but equipped with special welded guides to convey baskets.

Version "D"

Steam-heated tank without water circulation pump, equipped with special welded guides to convey baskets.

Moreover, there is a special version of VSA, named VSA2, especially designed for laboratory tests.
